

Srikanth Turpu

SDET & Associate Architect QE

Hyderabad, India • +91 9032903214 • srikanth.turpu@gmail.com

PROFESSIONAL SUMMARY

Hands-on QA automation professional with 14 years of experience personally designing, building, and maintaining end-to-end test automation frameworks across web, mobile, and API layers. Combines deep individual-contributor expertise with the ability to lead cross-functional teams, mentor QA engineers, and align testing strategy with business goals — consistently delivering high-quality, production-ready software faster.

KEY HIGHLIGHTS

- Hands-on individual contributor who designs, develops, and maintains automation frameworks and test scripts using Playwright, Cypress, Robot Framework, Selenium, Appium, and TypeScript.
- Built an AI QA Agent (Claude Code + Jira, Xray, and GitHub APIs) that analyzes user stories and linked pull requests to auto-generate manual test cases and Cypress automation, close coverage gaps, and prioritize the regression tests most relevant to each code change.
- AI QA Agent: Designed a quality-based feature coverage analysis agent that statically scores functional, scenario, and negative-path test coverage per feature, producing gap reports that give stakeholders a true confidence measure beyond raw test counts.
- Integrated automated testing into CI/CD pipelines (GitHub Actions, Jenkins) to enable continuous validation on every release.
- Built deep domain expertise across Healthcare, E-Commerce, Mobile, OTT, and Enterprise applications over 14+ years of hands-on QA automation experience.
- Own end-to-end test planning, execution, and defect tracking, translating business requirements into comprehensive test strategies that drive software quality and reliability.
- Lead and mentor QA teams alongside individual-contributor work, providing technical guidance and fostering a collaborative, high-performing testing culture.
- Proactively identify and assess risks and dependencies that could impact testing timelines, communicating them clearly to stakeholders.
- Configure and maintain test environments that accurately mirror production, minimizing environment-related defects.

TECHNICAL SKILLS

Core Skills: Playwright, Cypress, Robot Framework, Selenium, Appium

Secondary Skills: TypeScript, Core Java, Basic Python, API Testing, CI/CD, GitHub, Bitbucket, TestRail, X-Ray, Jira

AI Tools: Claude Code, Augment Code, Codex, ChatGPT, Gemini AI, GenAI Test Agents

PROFESSIONAL EXPERIENCE

ValueLabs Technologies

Sep 2013 – Present

CMC Limited

Jul 2012 – Sep 2013

EDUCATION

- Master of Computer Applications (MCA)
- B.Sc. Computers

AWARDS & ACHIEVEMENTS

In ValueLabs Technologies:

- Star of the Month
- Employee of the Quarter
- Best Employee

PROJECTS

Client Project: Artemis Health

Mar 2022 – Present

Description: The Artemis platform helps organizations quickly identify health risks and strategies to improve benefits design while driving down costs, with extreme flexibility and intuitive use — so users can spend less time getting to the right healthcare decisions, and more time acting on them.

- As an individual contributor, designed and maintained an automation framework using Playwright and Cypress (TypeScript), with reusable page objects, fixtures, and utility components, to validate benefits-analytics dashboards and reporting workflows.
- Automated functional, regression, smoke, and sanity scenarios covering benefits calculations, plan comparisons, and reporting outputs.
- Performed API testing and integrated API-level validations into the automation workflow to verify data accuracy between backend services and analytics dashboards.
- Executed automation suites through CI/CD pipelines on every release, analyzing test failures to distinguish real application defects from automation or environment issues.
- Also managed and guided the QA team, setting testing priorities and reviewing coverage across releases.
- Identified risks and dependencies that could affect testing timelines and communicated them proactively to stakeholders.
- Built an AI-driven QA agent (Claude Code + Jira/Xray/GitHub APIs) to analyze user stories and linked pull requests, identify missing manual test coverage in Xray, and auto-generate manual test cases and Cypress automation scripts.
- Developed a static-analysis coverage-scoring agent that evaluates functional, scenario, and negative-path test quality per feature and produces visual coverage-gap reports for QA and engineering leadership.

Client Project: Ritchie Bros.

Aug 2020 – Feb 2022

Description: Ritchie Bros. provides solutions for buying and selling heavy equipment, trucks, government surplus, commercial assets, total loss, damaged and low-value vehicles.

- As an individual contributor, built a test automation framework using Robot Framework and Python with a structured Page Object Model tailored to asset listing, bidding, and auction transaction workflows.
- Automated functional, regression, and sanity scenarios across asset search, listing detail, bid placement, and checkout flows.
- Performed root cause analysis on automation and application failures to keep defect turnaround fast during release cycles.
- Flagged risks and dependencies early enough to keep releases on schedule, briefing stakeholders as issues emerged.
- Also managed and mentored the QA team, aligning testing priorities and skill development across the group.
- Partnered directly with developers, product managers, and business analysts to translate business requirements into test scenarios.
- Executed regression testing on each release to confirm new changes did not affect existing bidding, asset, or transaction functionality.

Client Project: MobiTV

Feb 2015 – Jul 2020

Description: MobiTV offers a versatile OTT platform application that seamlessly supports Mobile, TV, and Web platforms, delivering an extensive range of channels spanning prime-time shows, news broadcasts, children's programming, and sports content, including live coverage from sources like FOX News and Associated Press and full episodes from networks such as ABC and Disney.

- As an individual contributor, built an automation framework using Selenium (Java) and Appium to validate VOD and channel-guide functionality across mobile, TV, and web platforms.
- Automated functional, regression, and smoke scenarios for playback controls, channel switching, and content search across multiple device types and OS versions.
- Tested across a range of physical and emulated devices to surface device-fragmentation issues, isolating device-specific playback defects from automation issues.
- Also managed and mentored the QA team on multi-platform test coverage and best practices.
- Used GitHub for version control and Jenkins for CI, scheduling and executing automation scripts for consistent, repeatable test runs.
- Performed regression testing on every release to ensure new changes did not impact existing app functionality.
