

Srikanth Turpu

SDET & Associate Architect QE

Hyderabad • +91 9032903214 • srikanth.turpu@gmail.com

PROFESSIONAL SUMMARY

Hands-on QA automation professional with 14 years of experience personally designing, building, and maintaining end-to-end test automation frameworks across web, mobile, and API layers. Combines deep individual-contributor expertise with the ability to lead cross-functional teams, mentor QA engineers, and align testing strategy with business goals — consistently delivering high-quality, production-ready software faster.

KEY HIGHLIGHTS

- Hands-on QA Architect and individual contributor building automation frameworks with **Playwright, Cypress, Selenium, Appium, and Robot Framework**.
- As a QE AI Engineer, built an AI QA Agent using Claude Code and Jira/Xray/GitHub APIs, significantly reducing manual test case creation effort and accelerating automation script generation.
- Built a QE AI agent that scores functional, scenario, and negative-path test coverage per feature.
- Integrated automated testing into CI/CD pipelines (GitHub Actions, Jenkins) for continuous validation on every release.
- Built domain expertise across Healthcare, E-Commerce, Mobile, OTT, and Enterprise applications over 14+ years.
- Own end-to-end test planning, execution, and defect tracking, translating requirements into effective test strategies.
- Lead and mentor QA teams alongside individual-contributor work, fostering a collaborative, high-performing testing culture.
- Proactively identify and communicate risks and dependencies that could impact testing timelines.

TECHNICAL SKILLS

Core Skills: Playwright, Cypress, Robot Framework, Selenium, Appium

Secondary Skills: TypeScript, Core Java, Basic Python, API Testing, CI/CD, GitHub, Bitbucket, TestRail, X-Ray, Jira

AI Tools: Claude Code, Playwright MCP, Augment Code, Codex, ChatGPT, Gemini AI, GenAI Test Agents

PROFESSIONAL EXPERIENCE

ValueLabs Technologies

Sep 2013 – Present

CMC Limited

Jul 2012 – Sep 2013

EDUCATION

- Master of Computer Applications (MCA)
- B.Sc. Computers

AWARDS & ACHIEVEMENTS

In ValueLabs Technologies:

- Star of the Month
- Employee of the Quarter
- Best Employee

PROJECTS

Client Project: Artemis Health

Mar 2022 – Present

Description: The Artemis platform helps organizations quickly identify health risks and strategies to improve benefits design while driving down costs, with extreme flexibility and intuitive use — so users can spend less time getting to the right healthcare decisions, and more time acting on them.

- As an individual contributor, designed a Playwright/Cypress (TypeScript) framework with reusable page objects and fixtures for benefits-analytics dashboards.
- Scaled the suite to 680 automated test cases covering functional, regression, smoke, and sanity scenarios.
- Reduced regression execution time from 8+ hours to under an hour by parallelizing Cypress across 12 GitHub Actions nodes.
- Automated 80+ REST APIs using Claude Code, validating data accuracy between backend services and analytics dashboards.
- Managed and guided the QA team, setting testing priorities and reviewing coverage across releases.
- Identified risks and dependencies affecting testing timelines and communicated them proactively to stakeholders.
- Built an AI-driven QA agent using Claude Code with Playwright MCP and Jira/Xray/GitHub APIs that flags coverage gaps and auto-generates test cases and Cypress scripts.
- Developed a coverage-scoring agent that evaluates functional, scenario, and negative-path test quality per feature.

Client Project: Ritchie Bros.

Aug 2020 – Feb 2022

Description: Ritchie Bros. provides solutions for buying and selling heavy equipment, trucks, government surplus, commercial assets, total loss, damaged and low-value vehicles.

- As an individual contributor, built a Robot Framework/Python automation framework with a structured Page Object Model for bidding and auction workflows.
- Automated functional, regression, and sanity scenarios across asset search, listing detail, bid placement, and checkout.
- Performed root cause analysis on automation and application failures to keep defect turnaround fast.
- Flagged risks and dependencies early, briefing stakeholders as issues emerged to keep releases on schedule.
- Managed and mentored the QA team, aligning testing priorities and skill development across the group.
- Partnered with developers, product managers, and business analysts to translate requirements into test scenarios.
- Executed regression testing each release to confirm changes did not affect bidding, asset, or transaction functionality.

Client Project: MobiTV

Feb 2015 – Jul 2020

Description: MobiTV offers a versatile OTT platform application that seamlessly supports Mobile, TV, and Web platforms, delivering an extensive range of channels spanning prime-time shows, news broadcasts, children's programming, and sports content, including live coverage from sources like FOX News and Associated Press and full episodes from networks such as ABC and Disney.

- As an individual contributor, built a Selenium (Java)/Appium framework to validate VOD and channel-guide functionality across platforms.
- Automated functional, regression, and smoke scenarios for playback, channel switching, and content search across device types.
- Tested across physical and emulated devices to isolate device-specific playback defects from automation issues.
- Managed and mentored the QA team on multi-platform test coverage and best practices.
- Used GitHub for version control and Jenkins for CI, running automation scripts for repeatable test runs.
- Performed regression testing every release to ensure changes did not impact existing app functionality.
