

SYSTEM TEST GUIDELINES DOCUMENT

System Test Document – Process Guidelines

- This is a remote desktop enabled proctored assessment. You shall receive details from the Learning Team with the server IP, username and password information.
- Login information is highly confidential. Please don't share it with anyone and it is strictly prohibited. Any deviation to this, shall not be accepted.
- Once you login to the RDC (remote desktop setup), you must go to OBS recorder app and click on start recording icon, located at the right side.
- There would be an assessment folder named "System Test References" that has questionnaires for the respective skillset. You can go ahead and select an assignment that you wish to work on
- You can download the codebase from the Git Repo links mentioned in each questionnaire.
- You must stay on call throughout the assessment window for 60 mins and screen recording to be on throughout the assessment session.
- Please ensure that you have working token/key for accessing AiDE Agents and it's working fine before you come for the system test
- Once the assessment is done, please click on Stop Recording icon at the bottom right.
- Kindly rename the saved recorded file with your name. Recorded video would be available at C:\Users\username\Videos

Mandatory Steps to follow:

1. Record your screen: Use OBS Recorder to create a recording of your process. Please start recording once you start the test and stop recording once it is completed.

2. Create a folder with your full name. Place it on the desktop. Now please place all these files in it.

? Codebase (kindly don't zip it)

? Create a folder called tasks. Place your exported tasks/.md files in this

Watch the instructional video: On the remote desktop inside the "System Test references" folder, you'll find a 2-minute video named "L&D" (Open it with VLC Player). Please watch this video – It's crucial for understanding how to generate prompts correctly and ensuring your prompt files are created properly

? Video recording file. Path would be (C:\Users\Username of your system >> Videos>> Recording)

3. After the execution of step 2, please ensure to execute the script "CopyFile" (which is placed on remote desktop) and it would ask you a file path. Here you have to copy your step 2 folder path (folder that you created on desktop with your name).

4. After step 3 is done, you will also see the progress of file transfer to the destination folder. Once it is done 100% file transfer, with this entire steps, are successfully completed.

SPOCs are as follows. If you have any doubts about the configurations or other issues, please check with them.

Java – Nishant Malhotra, Abhijeet Mishra, Prashanth Reddy Kurakatla

SYSTEM TEST GUIDELINES DOCUMENT

.NET – Dinesh Sajja, Nagamallika Surya Tejaswi Pothuraju, Tarun Kumar Susarapu

Frontend (React) – Santhosh TR, Ratan Babu Samudrala

DevOps – Ashay Maheshwari

Python – Mahak Agrawal

General Guidelines (Do's and Don'ts)

1) No leakage/visibility of Client Data:

Given that the test is recorded, please ensure that no client related software like Teams, Slack, Confluence, Jira, Git or IDE is opened during the test window.

2) Be on Video Throughout the Session:

All participants are expected to have their video turned on during the testing session for transparency and collaboration.

3) Adhere to Timelines:

Please ensure that the assigned tasks are executed within the specified time window. Timely completion is essential for tracking efficiency and identifying any gaps.

4) Follow Task Instructions Diligently:

Complete the tasks as per the provided instructions without deviation unless specifically asked to explore alternatives.

5) Report Issues Promptly:

If you encounter any challenges, report them immediately to the designated POC to avoid delays.

6) Respect Confidentiality:

Do not share any screenshots, logs, or test outputs outside the designated channels without prior approval.

System Test Guidelines:

1. Please develop a thorough understanding of the codebase, its key components and use the plan mode to plan the tasks.

2. Carefully review and refine the plan before any code execution. Ensure each step logically follows from the previous one.

SYSTEM TEST GUIDELINES DOCUMENT

3. Please utilize the momento file to the best extent. Create modular momento files for sub-tasks to manage complexity effectively. This allows for easier scaling and reuse of existing plans.
4. Align goals closely with execution to ensure high quality code. Result in more reliable and maintainable software.
5. Manage dependencies carefully. Ensure that each action is completed before moving on to the next step.
